Here is a step-by-step guide to run your code:

Step 1: Install Python

Go to the official Python website (www.python.org) and download the latest version of Python for your operating system (Windows, macOS, or Linux).

Follow the installation instructions to install Python on your computer.

Step 2: Install Required Libraries

Open a terminal or command prompt(cmd) on your computer.

Type the following command to install the required libraries:

pip install selenium

Press Enter to run the command.

pip install webdriver_manager

Press Enter to run the command.

Step 3: Run the Script

Extract the .rar extension file provided to you in a folder.

Open a terminal or command prompt and navigate to the directory where you saved the file.

Type the following command to run the script: python Email.py

Press Enter to run the script.

Step 5: Follow the Prompts

The script will prompt you to select the brand, model, fuel, price, construction year, transmission, and mileage.

Enter the corresponding numbers to select your preferences.

The script will then continuously check for new ads on the marketplace site and send you an email notification when a new ad is found.
